

UR - Nantes-Atlantique Economics and Management Laboratory (LEMNA)

SUPERVISORY BODIES

Within LEMNA, Oniris teacher-researchers are more specifically developing their research around the theme "Produce and feed sustainably". They are particularly interested in innovation strategies within food chains, the impact of different forms of proximity on organization and consumption and the processes of patient engagement towards a better nutritional alliance. More generally, LEMNA is structured around three research themes: Enterprise, Labour and Society (ETS), Finance, Environment, Sea (FEM) and Organisation, Information, Performance (OIP). Each of these themes is divided into sub-themes and brings together specific research groups on promising topics related to current social and societal concerns such as well-being at work, information and communication technologies and their impacts on organisations, markets and people, innovation and entrepreneurship or the maritime economy in the face of change and risks.
