

# **MOOC Exploratory Multivariate Data Analysis**

#### **Prospects**

Formation continue

#### Pré-requis

An undergraduate level is quite sufficient to capture all the concepts introduced.

Basic knowledges in statistics are necessary, such as: correlation coefficient, chi-squared test, oneway ANOVA.

On the sofware side, an introduction to the R language is sufficient, at least at first.

### Teaching languages Anglais

#### **Useful** information

**Durée de la formation :** 4 weeks **Formation :** A distance, 5h a week

### Programme

Week 1. Principal Component Analysis

Week 2. Correspondence Analysis

Week 3. Multiple Correspondence Analysis

Week 4. Clustering

### Compétences visées

This course will be held in English. It has been designed for scientists whose aim is not to become statisticians but who feel the need to analyze the data themselves.
